CHALLENGES AWAIT

# your challenge starts here

The more challenging the problem, the more excited we are.

Improving the market is an extraordinary challenge that requires extraordinary people. We are a leading global electronic market maker, committed to improving the financial markets. Our Traders monitor positions, adjust prices and make trades while our Tech experts build the fastest and most reliable systems to get the best prices to the markets.

We are seeking the best and brightest S.T.E.M students to join our team. We are looking for passionate problem solvers - the kind of people who are innately curious, have inquisitive minds and a real drive to succeed. Don't know much about finance? You don't need to! If you have the skills, we have the tools and training to make you successful at Optiver.

## Do you have what it takes?

If you like challenging yourself, we want to meet you! We're holding an information and testing session on-campus. So come along to check out what it's like to work here and find out where your skills fit in. You'll also get the chance to kickstart our recruitment process by taking our tests!

## Trading Testing

We'll be running 2 numerical tests. The first test is an 8 minute, 80 question maths test, focusing on basic mental arithmetic. The second test is a 30 minute maths test focusing on number series and sequences. We're assessing your speed and accuracy so you won't be allowed to use a calculator.

## Tech Testing

We'll collect your details on the day and email you a link to our online technical test. This test will take up to 90 minutes to complete at your own convenience.

## Please note:

Sydney roles: You need to be an Australian Citizen / PR or New Zealand Citizen to apply.

Shanghai roles: You need to be a Chinese citizen to apply.

You'll only get one chance to complete our testing, so make sure you give it your best shot!
