Bachelor of Engineering (Honours)

Built on a Systems Engineering framework, the Bachelor of Engineering (Honours) will teach you how engineering disciplines work together. It's an engineering degree designed for the future.

Want to make a difference to society, or solve some of the world's largest problems? Would you like to make solar energy technology more efficient, invent the next generation of smartphones or create materials that support the growth of human cells?

If you're creative, enjoy teamwork and mathematics or science - then engineering could be for you.

Our Bachelor of Engineering (Honours) teaches students to become problem finders in a fast-growing industry, where design solutions and innovative thinking are vital.

This degree boasts many unique characteristics, but best of all, it is built on a 'systems engineering' framework, where you will learn how engineering disciplines work together. Our state-of-the-art education experience ensures you will be able to design, analyse and manage the complex systems of the future.

The first 18 months is common for all students. You'll be exposed to many engineering disciplines, before specialising in your chosen field. After that, you can choose to specialise in anything from renewable energy systems to mechatronics.

Yafet

Bachelor of Engineering (Honours)

"This world-class, personalised degree gives me the opportunity to study up to two majors within a unique systems engineering program. I can experience the different aspects and applications of my field, and when I graduate I'll have multiple pathways open to me."

Engineering Majors

- Engineering Majors
- Electronic and Communication Systems
- Mechatronic Systems
- Renewable Energy Systems
- Environmental Systems (new in 2022)
- Aerospace Systems (coming in 2023)

Careers

Engineering careers are diverse and in demand in Australia and overseas. At ANU, you will develop skills and abilities that are highly sought after in engineering and other organisations. Thanks to the unique interdisciplinary approach, many of our graduates quickly progress to senior roles.

Bachelor of Engineering (Research & Development) (Honours)

Our Research & Development (R&D) programs have an innovative structure, allowing you to conduct research projects throughout your degree.

Stand out with your capacity for innovation. You will study engineering fundamentals while being immersed in a research area of your choice. This degree is designed for high achieving students. It will allow you to excel in your career, make a tangible difference to society and help solve some of the world's largest problems.

In this program you will undertake advanced courses. You will receive unique opportunities to complete research projects alongside our world-class academics.

From the second year, these research projects will form part of your coursework, exposing you to cutting edge research.

You'll get a taste for what it's like to undertake research while completing a degree that will also perfectly position you for work in industry. We are the only university that offers undergraduate Research and Development programs in Australia.

- You can combine a Research and Development program in a Flexible Double Degree.
- We offer pathways into Research and Development. If you commence in a Bachelor of Engineering (Honours) and achieve a High Distinction average in your first year, you may be eligible to transfer into a Research and Development degree for second year.
- Students interested in research can also undertake Summer Research Scholarships or voluntary work with academics.

Bachelor of Information Technology

Join the revolution, in a truly globalised and fast changing industry.

Information Technology (IT) is everywhere – from your entertainment to your gadgets. It is changing the way we live, learn, work and even socialise. If you are interested in driving this exciting revolution, in a truly globalised and fast changing industry, this program is for you.

You will receive a strong grounding in computing fundamentals to tackle the progressive nature of technology. With IT an intrinsic part of all industries, knowledge of software development and information systems is highly sought after by the best employers.

Accredited by the Australian Computer Society ¹

Honours

An honours year of the Bachelor of Information Technology is available for eligible students. The honours program includes advanced coursework and a major individual project. For ANU students, admission is by invitation based on performance. External students may apply directly to the University.

Septian

Bachelor of Information Technology

“The Bachelor of Information Technology has opened my eyes to the multiple pathways in the field of computing, from the typical programming side to the business side of it. Combined with the flexibility of this degree, it has allowed me to explore and pursue what I truly want to learn.”

Information Technology Majors

- Advanced Intelligent Systems
- Computer Systems
- Cyber Security
- Data Science
- Information Systems
- Intelligent Systems
- Software Development

Careers

Career options for ANU graduates in IT, and particularly students who have completed a combined degree, are wide and varied. IT skills are a real competitive advantage and all organisations need people to work on and understand their IT systems.

Bachelor of Advanced Computing (Honours)

This is a unique, interdisciplinary program that will prepare you to be a future leader of the information and communications technology (ICT) revolution.

There is hardly any aspect of modern society untouched by the computing revolution. Some of the biggest challenges we face today will all be solved with an ICT component, whether it is in predicting efficiencies in renewable energy systems or using machine learning to diagnose illnesses.

In this program you will study advanced computing techniques and complete a unique specialisation. You will learn advanced computing techniques and develop exceptional professional skills including communication and teamwork.

Tina

Bachelor of Advanced Computing (Honour)
Bachelor of Science

“At ANU there’s a real multidisciplinary and big picture research focus, I think there’s actually a lot of humanity in computer science, which you don’t realise until you look beneath it.”

Advanced Computing Specialisations

- Artificial Intelligence
- Machine Learning
- Systems and Architecture
- Theoretical Computer Science

Careers

The best computing professionals often have knowledge in fields wider than computing alone. There are many innovative ways to use skills from this program in a range of disciplines. Our graduates will be ideally positioned to launch a dynamic career and acquire the skills and knowledge to become leaders in the ICT industry.

Bachelor of Applied Data Analytics

Data skills are in demand. Develop interdisciplinary knowledge across computing, statistics and social science.

The Bachelor of Applied Data Analytics is an interdisciplinary degree designed to meet the demand in the modern workforce for data analytics. You will learn to inform high-quality, data-informed decision-making. This multi-disciplinary degree includes courses in computing, statistics, and social science. These highly sought-after skills can be applied in careers across business, government, and community – including finance, health, and national security.

Honours

An honours year for the Bachelor of Applied Data Analytics is available for eligible students. The honours year will provide you with high-level skills for life as a practitioner, or for undertaking further study. You will receive research methods and principles training, undertake advanced coursework, and complete a major research project.

Naomi

Bachelor of Applied Data Analytics

"Applied data analytics is perfect for people who are eager to learn and have broad interests. It combines sciences with arts to solve problems. The versatility of my degree has allowed me to discover what really sparks my passion, which is solving societal issues using holistic approaches. I'm combining the study of cultural background, qualitative data collection, and analytical statistic programming skills."

Careers

This interdisciplinary degree is designed to address a global shortage of graduates with skills in data analytics applied to high quality, data-informed decision making. Our graduates will be ideally positioned to enter jobs such as a Technology Entrepreneur, Database Administrator and Developer, Policy Analyst, Information and Data Analyst and Data Scientist.
